

HELP SAVE WATER

AND PROTECT THE FUTURE

Using a **Professional Car Wash** helps limit water usage and safely disposes of waste water

Using SPACE AGE TECHNOLOGY, our car wash saves up to 80% more water versus washing at home via our computerized system.

Car wash soap and dirty water is captured and treated properly before leaving our facility. When washed at home, used water may enter the gutter and our stormwater system, which is not treated and goes directly back into our drinking water supply.

WATER USED WASHING YOUR CAR: THE SAVINGS IS CLEAR

Home Car Wash: 80 - 140 gallons

In Bay Roll Over: 24 - 45 gallons

Full Service - Conveyor: 15 - 32 gallons

Express - Conveyor: 15 - 28 gallons

Learn more at bluerocketcarwash.com

COMMON WATER USAGE AROUND THE HOUSE:

Shower: 17 - 25 gallons

Bath: 30 - 50 gallons

Laundry: 15 - 30 gallons

Our company can re-use water in multiple ways:

High Pressure Spray system re-uses water

Wheel Cleaner System uses recycled water

Pre-Rinse uses Spot-Free reject water

Underbody Rinse uses Reclaimed water

Wash-down and clean with Reclaimed water

Irrigation uses Reclaimed water for landscape

A computerized system monitors water usage

We've saved 600,000 gallons a year since 2019

We meet or exceed industry requirements

WATER: HOW WE (RE)USE IT

Spot-Free Rinse is made...

and a portion of the used water is saved..

and re-used in the wash process.

We also have underground storage tanks...

that we suck water up from...

run it thru a filtration system..

making it re-usable again...

to clean dirty wheels...

and use as Underbody Rinse...

allowing us to reduce and reuse our water.
